

# IMPORTANT PROTOCOL: DAILY CHECKS FOR MYCOTOXIN WARNING SIGNS

**Visible moulds in forage and feed**

**Heating behind the clamp face**

**Loose and/or inconsistent dung**

**Reduced feed intakes**

**Swollen hocks and arched backs**

**Reduced fertility**

**A sudden drop in milk yield**

**Increased somatic cell counts**

**Call 01780 764512 to order your mycotoxin testing kit or find out more about adding Mycosorb A<sup>+</sup> to your herd's diet.**

Mycosorb A<sup>+</sup> offers proven broad - spectrum mycotoxin binding capabilities, including to *Penicillium* toxins, the most common toxin group detected in recent UK mycotoxin testing, helping limit the damaging impact of mycotoxins and ensuring your herd is performing to its full potential.
